## Heat Gun Nozzles

Description	Picture	Accessory application	Application
Reflector nozzle A		Directs the hot air to one side, such as heating to bend the plastic tube, the hook can ensure the hot air surround the tube, increase the heating area of the tube, accelerate the softening of the tube, improve work efficiency, and also shrink the heat shrinkable tube.	
Glass protector nozzle A		Directs the hot air to one side to avoid the influence of hot air on the other side. For example, when removing the glass glue on the window, it can protect the glass.	
Fish tail surface nozzle A		Directs a long narrow heat pattern to the work piece, it's ideal for removing paint or varnish from large flat surfaces, such as heating and soften the old paint on the table or door, then the paint on the surface can be scraped off with a scraper. Another example is that it can also be used when using heat shrinkable film.	
Concentration nozzle A		Concentrated hot air into a circular shape, can be used in some corner heating.	
Scraper AC		Use with nozzle, to assist in the use of workings such as scraping paint, scraping glass glue, etc. that cannot be handled directly by hand.
